

CU2 FIRE DAMPER

TECHNICAL FEATURES

- Damper range (Wn x Hn): 200x200 till 1500x1000.
 - Outside dimension damper tunnel : (Wn+24)x(Hn+24)
 - Damper can be installed with blade in horizontal position.
- 
- Damper can be installed with mechanism on either side of the wall (independent of fire side).
 - Please consult with the fire batt manufacturer for appropriate sealant/coating.
 - A max. of 2x2 fire dampers can be installed at tested minimal distances – see separate installation details.
 - To be read in conjunction with the CU2 Fire Damper Technical Datasheet.
 - Guidelines acc. to DW144/145 (not required for CE):
 - Installation lugs as shown in the drawings are available upon request.
 - Provide appropriate break-away / flexible joint between fire damper and connecting ductwork on both sides of the assembly (DW145: eg socket & spigot or flanged with appropriate fixings eg plastic cleats, clips, clamps, bolts, aluminium alloy rivets etc.).
 - Provide a panel in the adjacent ductwork to allow access to the internal components of the fire damper. Rf-t can provide an inspection opening on the damper body upon request (option UL).
 - Ductwork must be independently supported and installed (DW144).
 - Dimensions in mm unless otherwise stated.

CU2 FIRE DAMPER ASSEMBLY

Max. 4 CU2 fire dampers with max. dimensions 1500x1000 mm to be connected to 1 single duct.
Order details: please consult Rf-Technologies.

TECHNICAL FEATURES

- Damper range (single damper) (Wn x Hn): 200x200 till 1500x1000.
- Outside dimension tunnel (single damper): $(Wn+24) \times (Hn+24)$
- Damper can be installed with blade in horizontal position.

- Damper can be installed with mechanism on either side of the wall (independent of fire side).
- Please consult with the fire batt manufacturer for appropriate sealant/coating.
- A max. of 2x2 fire dampers can be installed at tested minimal distances.
- To be read in conjunction with the CU2 Fire Damper Technical Datasheet.
- Guidelines acc. to DW144/145 (not required for CE):
 - Installation lugs as shown in the drawings are available upon request.
 - Provide appropriate break-away / flexible joint between fire damper and connecting ductwork on both sides of the assembly (DW145: eg socket & spigot or flanged with appropriate fixings eg plastic cleats, clips, clamps, bolts, aluminium alloy rivets etc.).
 - Provide a panel in the adjacent ductwork to allow access to the internal components of the fire damper. Rf-T can provide an inspection opening on the damper body upon request (option UL).
 - Ductwork must be independently supported and installed (DW144).
- Dimensions in mm unless otherwise stated.
